

CUSTOM PRINTED ROLL STOCK

TECHNICAL QUALITY TOLERANCE

ROLL WIDTH

The width of the roll stock. Also referred to as Web Width.

TOLERANCE IS +/- 1/16"

OUTSIDE DIAMETER

The diameter of the printed material plus the core. Provide your maximum outside diameter (max OD) to ensure we produce the rolls at the right size. OD's that are too large can be difficult to maneuver or may not fit on the equipment.

CORE SIZE

The hollow tube at the center of the roll used to mount on the equipment. Roastar offers a 3" core.

COLOR TOLERANCE

TOLERANCE OF 3 dE

Delta-E (dE) is a single number that represents the 'distance' between two colors. We use color matching software to help verify the press is calibrated for the correct color.

REPEAT LENGTH

The length of one printed impression on the roll.

QUANTITY TOLERANCE

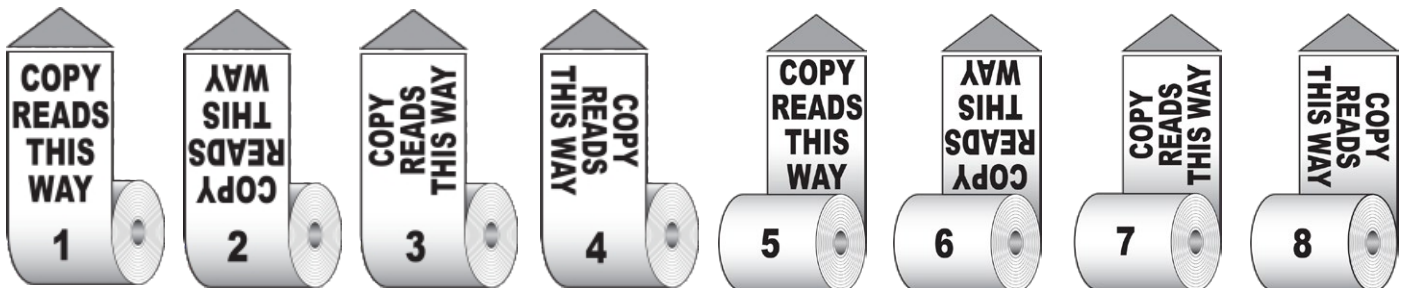

Over 1,000 quantity per SKU: +/- 5 %

We will produce within a 5% tolerance margin of your quantity.

We may produce and ship slightly above or below your desired quantity, therefore you may have a remaining balance if we produce and ship more, or be reimbursed if we produce and ship less.

REWIND DIRECTION

Also referred to as unwind direction, the rewind direction determines the orientation of the impression coming off the roll. Knowing your rewind direction ensures artwork reads the right way after it is formed and sealed.
